Adult Horse Vaccination & Deworming Record

Name of Horse _____

Age _____ Sex _____ Breed _____

Adult Horses Who Have Been Previously Vaccinated

Month	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec
Rabies				Appt #1								
Potomac Horse Fever				Appt #1			Booster			Appt #1		
West Nile				Appt #1						Appt #1		
Influenza-Rhinopneumonitis				Appt #2						Appt #2		
EEE/WEE/Tetanus				Appt #2						Appt #2		
Lyme Disease				Appt #2						Appt #2		
Leptospirosis				Appt #1								
Strangles				Appt #3								
Coggins				Appt #1								
Physical Exam				Appt #1						Appt #1		
Dental Exam/Float				Appt #1						If needed		
Sheath Cleaning				Appt #1						If needed		
Fecal Egg Count				Appt #1						If needed		
Deworming:	VLAC-EH can help you establish the most effective deworming schedule to minimize risk of parasitic disease and avoid drug resistance. VLAC-EH recommends collecting a fecal sample once or twice a year to perform a fecal egg count (FEC). Based on the results of the FEC, we will recommend a specific deworming plan to target the parasites shedding eggs into your horse's feces and other silent invaders. The goal of FEC-informed plans are to reduce egg shedding and parasite transmission. The goal is <i>not</i> to obtain FECs of zero.											

*These times are approximate and may not represent your horse's exact schedule. Discuss your horse's specific needs with VLAC for possible alterations to the schedule (i.e. travel to specific regions, changes in disease prevalence year-to-year, etc.). Spring Appointment #2 is typically 2 weeks after Appointment #1.
